

For the first time, catalogues of population health information sources from national and international organisations are findable through a single European Health Information Portal.

WHAT DOES THE HEALTH INFORMATION PORTAL OFFER NOW?

The Health Information Portal is a one-stop shop **facilitating access to population health and health care data, information and expertise in Europe**. The Portal provides catalogues on:

Data sources and data providers or data managers

Information on National Nodes and Research Networks

Health information projects within countries and across Europe

WHAT WILL THE HEALTH INFORMATION PORTAL OFFER IN THE NEAR FUTURE?

The Health Information Portal will offer the **services and tools necessary for researchers to access and link different data sources** and to use Pan-European data in a GDPR compliant, federated way. The Portal will also include a focus area on activities related to the management of COVID-19 to further support researchers and policy makers:

Training and capacity building in all areas of population health

A toolbox for legal and ethical guidelines

Publications, reports, guidelines and articles

The Portal is designed to be part of the Distributed Infrastructure on Population Health ([DIPoH](#)). DIPoH is a product of the Joint Action on Health Information ([InfAct](#), 2017-2021). DIPoH has led to the implementation of the Population Health Information Research Infrastructure ([PHIRI](#), 2020-2023) as a roll out of DIPoH in the area of COVID-19.

ABOUT PHIRI:

The PHIRI project implements a Population Health Information Research Infrastructure, facilitating open, interconnected and data-oriented population health research across Europe with a COVID-19 perspective. By means of the Health Information Portal, it aims to improve collaboration and exchange of good practices between European countries

regarding collection, evaluation, accessibility and reuse of health data, and to promote sharing of expertise.
