PHIRI

The Population Health Information Research Infrastructure:

- a **European mechanism**, that aims to
- facilitate and support **data-driven population health research**
- and **exchange of best practices**
- to support **decision making**

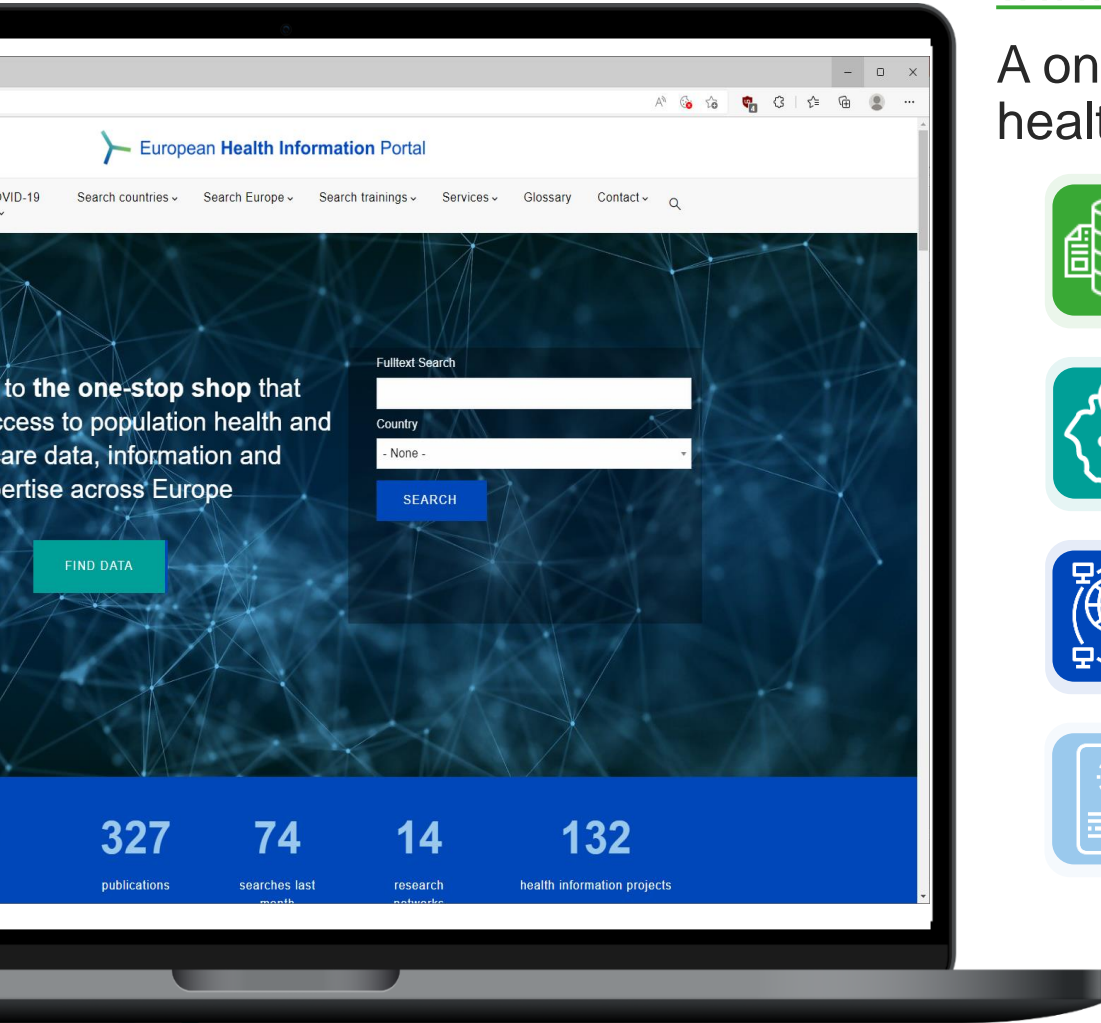

Map of PHIRI Partners

The Health Information Portal

www.healthinformationportal.eu

A one-stop shop that facilitates access to population health and health care data, information and expertise across Europe.

Data sources metadata catalogue

OVERVIEW	DEMOGRAPHICS	DATASET	CONTACT
Acronym	MNCR		
Type of information	Registry data		
URL of the data source	https://deputyprimeminister.gov.mt/en/dhir/Pages/Registries/cancers.aspx		
Description	The aims of this register are 1)To collect data, keep a register and follow up all residents of the Maltese Islands who are diagnosed with cancer, and 2)To provide a surveillance function		

It provides structured information on

- Population registries
- Health survey data
- Surveillance data
- Hospitalizations (in- and out-patient)
- Healthcare resources, costs and activities
- Etc.

The metadata template is mapped to ***Schema.org and to DCAT metadata standards***, further increasing the findability of the data on the web

Metadata of a data source

- Type of Information
- URL of the data source
- Description
- Governance & legal framework
- Keywords & topics

OVERVIEW	DEMOGRAPHICS	DATASET	CONTACT
Acronym	HIS		
Type of information	Survey/interview data		
URL of the data source	https://www.sciensano.be/en/projects/health-interview-survey		
Description	<p>A national Health Interview Survey (HIS) provides an overall picture of the health status of the population and allows to identify the main health problems, as well as the social and behavioral factors that influence them. This information enables health authorities to pursue a proactive health policy aimed at improving public health and addressing the needs of groups at risk. Researchers, experts and the press use the results of the HIS.</p>		

Metadata of a data source

Supporting data-driven research

For my research I need data on prevalence of NCD's in European countries. Where to find it?

Data **without** metadata

Hospital Discharge Data, NL

Social Health Insurance Data, AT

Care Register for Health Care, FI

Primary Health Care Database, HR

Morbidity data, RO

- What type of data are these?
- What age groups do they cover?
- Who owns these data?
- How do I get access to these data sources?

Through my networks and internet search I was able to identify the following potential data sources

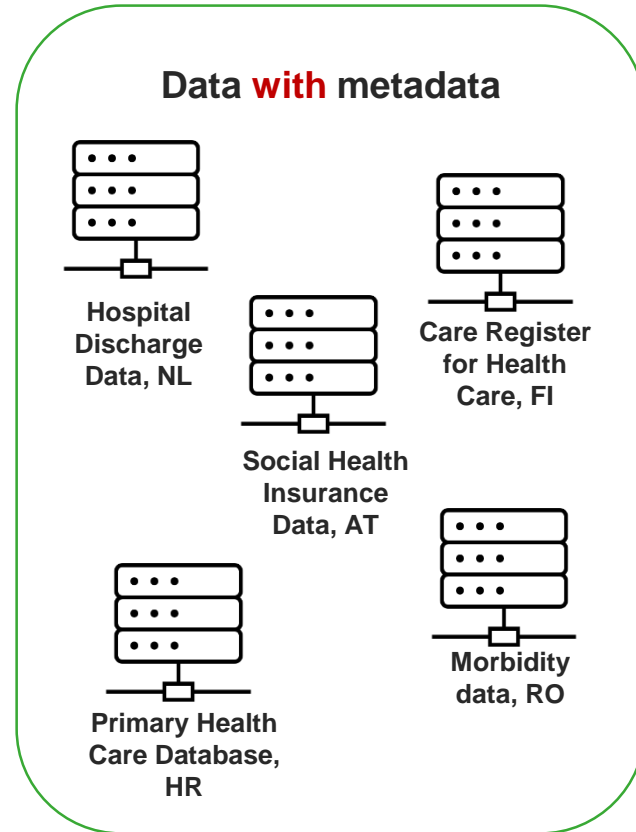

Why metadata?

For my research I need data on prevalence of NCD's in European countries. Where to find it?

Through the Health Information Portal I was able to identify the following potential data sources

In structured format

- Data on hospitalizations
- Covers all 18+
- National coverage
- Contact details for access requests

Metadata on the Health Information Portal

Development process of the metadata elements:

1) Metadata elements developed by population health researchers

- In order to accommodate all metadata relevant for population health information

2) Mapping to schema.org

- Schema.org is a metadata standard for the indexation of web pages
 - Improves machine to machine communication
 - Increases discoverability

Effects of Schema.org

The Health Information Portal - Google search analytics:

- Clicks: number of times a user clicked on a link provided by Google to the HIP.
- Impressions: how often someone saw a link of the HIP on Google.

Metadata on the Health Information Portal

Development process of the metadata elements:

- 1) Metadata elements developed by population health researchers
 - In order to accommodate all metadata relevant for population health information
- 2) Mapping to schema.org
 - Schema.org is a metadata standard for the indexation of web pages
- 3) Mapping to DCAT
 - DCAT is a vocabulary for publishing data catalogs on the web
 - Facilitates sharing of data & interoperability between data catalogs
 - Increases the discoverability of datasets
 - Allows federated search for datasets across catalogs in multiple sites

Metadata in the European landscape

Proposal for a regulation - The European Health Data Space published on May 3rd by the European Commission.

Section 5 – Article 55.1

*“The health data access bodies shall inform the data users about the available datasets and their characteristics through a **metadata catalogue**. Each dataset shall include information concerning the source, the scope, the main characteristics, nature of electronic health data and conditions for making electronic health data available”*

- The Health Information Portal has these metadata available in a standardized format
- The Health Information Portal can provide a starting point for the national authorities to create a catalogue
- Through an API these metadata are available for everyone
